

## TeenTech Basics - Module 1: What is a Computer?

A computer is an electronic device that processes data and performs tasks based on a set of instructions called programs. It consists of hardware (physical parts) and software (programs and operating systems). Common hardware includes the monitor, keyboard, mouse, and CPU.

Computers are used in almost every aspect of modern life - from education, business, and communication, to entertainment and science. Understanding how computers work is a key part of becoming digitally literate in today's world.
